

AgentDesk

**Agent workflows with
payments you can trace**

Hackathon pitch / Payment Workflows

The integration and trust gap

WORKFLOW BUILDERS

Every new provider adds integration and billing work.

Target: teams combining market data and research into repeatable workflows.

AGENT CREATORS

A useful endpoint still needs discovery and a track record.

Target: developers selling a specialist capability one call at a time.

A marketplace connected to execution

Providers publish a call price.
Builders choose by capability.
The engine runs the sequence.

Identity, stake and reputation remain visible in the listing.

The screenshot displays the AGENTDESK Marketplace interface. At the top, a navigation bar includes the AGENTDESK logo and links to Dashboard, Marketplace (active), Workflows, Payments, Settlements, and Schema. User information on the right shows 'demo mode', 'builder@agentdesk.local', and a 'Sign out' button.

The main section is titled 'Marketplace' with a subtitle: 'Every Agent on the Registry, with the Stake it has locked and the Reputation its settled Calls earned it. Pick a Provider for each Node on the evidence, not on the description.' A status indicator shows 'Live · every 5 s · updated just now'.

Filters and sorting options are available: 'TYPE' (All, data, research, risk, execution, notify) and 'SORT BY' (Reputation, Price).

A summary line indicates '6 Agents · 1.22 tUSD staked · 6 active'.

The marketplace lists six agents in a grid:

- Sloppy Research** (RESEARCH, active): 0.03 tUSD per call. Reputation: 0% (over 1 scored Call). Stake at Risk: 0.27 (tUSD locked behind every Call). Owner: ERC-8004 agent.
- Guardrail Risk** (RISK, active): 0.02 tUSD per call. Reputation: no score yet (no Call of this Agent has been settled). Stake at Risk: 0.2 (tUSD locked behind every Call). Owner: ERC-8004 agent.
- Alpha Research** (RESEARCH, active): 0.05 tUSD per call. Reputation: no score yet (no Call of this Agent has been settled). Stake at Risk: 0.5 (tUSD locked behind every Call). Owner: ERC-8004 agent.
- Telegram Notifier** (NOTIFY, active): 0.005 tUSD per call. Description: Posts the Run summary, the cost table, the payment.
- Binance Ticker** (DATA, active): 0.01 tUSD per call. Description: BNBUSDT last price, 24 hour change and 24 hour.
- Binance Spot Executor** (EXECUTION, active): 0.01 tUSD per call.

Five agent types, replaceable providers

What the working prototype proves

VERIFIED IN THE RECORDING

- 2 completed data + research runs
- 1 newly registered paid provider
- Payment and refund transaction proofs
- Budget and listing controls

NEXT INTEGRATION GATE

- Exchange execution
- Telegram delivery
- Alpha Research credentials
- Public testnet deployment

A business model tied to paid usage

2–5%

**Proposed platform fee
on paid agent calls**

Initial pilot

Research and market-data providers
Workflow builders with repeat demand

Measure repeat usage and
creator retention before scaling.

The path to a controlled pilot

01

Complete integration

Public testnet
Exchange test orders
Notification delivery

02

Strengthen safeguards

Signing and custody
Recovery and reconciliation
Independent evaluation

03

Validate repeat demand

Provider onboarding
Repeated paid workflows
Retention and refund rates

The next step: a design-partner pilot

Agent workflows with accountable service payments

Seeking research providers and workflow builders to validate repeat use in a controlled pilot.
